gusc'

1. (Amended) An integrated circuit device, comprising:

a programmable portion comprising a plurality of circuits configurable by a user of the integrated circuit device; and

at least one communication portion comprising at least one circuit block manufactured to perform a predetermined data communication function including converting received first data values into second data values.

10

21. (Amended) A method, comprising the steps of:

performing predetermined logic functions on a programmable logic portion of the integrated circuit; and

performing serial data communication functions on a communication portion of the integrated circuit that includes circuit blocks that are not formed with programmable logic device configuration data.
